

IBM India visited our campus for a campus recruitment drive in the month of September 2025, and I am sharing my interview experience with the company below.

Overview

1. Online Assessment
2. Technical Interview Round
3. Managerial Interview Round

Online Assessment

The Online Assessment was conducted virtually on HackerRank, and it consisted of two coding questions. Both were very easy questions. One of them was an anagram-based question, and the other one was to be solved using a priority queue.

Technical Interview Round

The first round of interview was conducted in person and I have mentioned the questions I was asked below, categorized based on the subject.

Resume

1. What is RAG?

C++

1. What is shallow copy and deep copy?
2. What is the "virtual" keyword?
3. What is v-table?

OOPS

1. For runtime polymorphism, what else is necessary, other than the function to be virtual?

OOAD

1. Explain the SOLID principles.

Coding

1. Given a string for example, "abbcdddee", output "ab2cd2e3" given that all similar characters are adjacent and the order of characters in output is same as in the input string.

2. Leetcode 198

General

1. Do you have any experience where you had to learn some new technology/tech stack within a limited time frame?

Puzzles

1. Given a rope that burns out in 1 hour, how will you measure 45 min using it?
2. What is the minimum number of cuts required to cut a cake into 8 equal parts? (Ans: 3)

After the first round, I was selected for the next round.

Managerial Interview Round

The second round was also conducted in person and the following are the questions that I was asked:

1. Given 12 coins (11 real and 1 fake) with the fake coin weighing lesser than the real coins, what is the minimum number of times you have to weigh to find the fake coin? (Answer: 3)
2. Given a very long URL, how will you provide a shortened URL to the customer that maps to the long URL? (Expected Answer: Hash Table)
3. What is your favorite subject? (Because I answered DBMS) What DBMSes are you aware of? (Because I answered that I have hands on experience with Neo4j, MongoDB and MYSQL) What is the difference between Neo4j and MySQL and when will you use each of them?
4. Explain your favorite project.
5. What job are you expecting to do at IBM?

Few days later, IBM released the offer list and I am happy to tell that I was one of the offered students :)

Hope my experience will help and All the best!

I recently attended the IBM On-Campus Drive (September 2025) and would like to share my experience.

Eligibility

- Open to female candidates from all branches.
- Conducted across multiple colleges in Bangalore.
- The entire selection process consisted of three rounds.

Round 1: Coding Assessment 1 (Virtual)

Mode: Online (Proctored)

Duration: 1 hour

No. of Questions: 2

Difficulty Level: Moderate

Topics Covered:

- Greedy Algorithms
- Max Heap

Candidates who cleared this round were shortlisted for the next assessment round, conducted offline after 4 days.

Round 2: Coding Assessment 2 (Offline)

Mode: Offline (Morning Session)

Duration: 80 minutes

No. of Questions: 3

Difficulty Level: Moderate to Difficult

Question Types:

- If-Else Logic – Medium
- SQL Query with JOINS – Medium
- Pattern Printing – Difficult

⚡ Note: Based on feedback and previous experiences, this was considered the toughest round.

⚡ Out of all participating colleges in Bangalore, only 5 students were shortlisted for the next (Interview) round.

Round 3: Technical + HR Interview

As I was **not selected** for this round, I don't have complete details of the questions asked.

However, based on past experiences, candidates can expect core subject, coding, and HR-related questions.

I attended the IBM India pooled drive in August at Coimbatore, Tamil Nadu for the role of Software Developer.

Eligibility:

- Only female candidates from B.E/B.Tech (CSE, IT, ISE, AI&DS, EEE, ECE, EIE), MCA, M.Tech (Data Science), M.E (Embedded Systems)
- 70% in UG with no standing arrears

The process had 3 rounds:

Round 1: Coding Assessment 1 (Virtual)

- Mode: Online, proctored
- Duration: 1 hour
- Questions: 2 (Greedy, Max Heap)
- Difficulty: Moderate

Shortlisted candidates were invited to the next round, conducted 4 days later at a common college.

Round 2: Coding Assessment 2

- Mode: Offline (Morning session)
- Duration: 75 minutes
- Questions:
 - (i) Simple if-else logic
 - (ii) SQL query with join
 - (iii) Pattern printing
- Difficulty: Easy–Moderate

Candidates solving at least 2 questions moved to the technical interview.

Note: Coding assessment 2 was easier than coding assessment 1.

Round 3: Technical Interview (Afternoon session)

- Duration: ~30 mins
- Panel: 2 interviewers
- Questions/topics discussed:
 - (i) Asked me to explain the logic for the pattern-printing problem in round 2
 - (ii) SQL queries + one scenario-based DB question
 - (iii) Factors to consider while designing a website for a grocery store
 - (iv) My web development projects
 - (v) How web pages are rendered
- Since I'm from a non-CS background, questions were kept application-oriented rather than deeply technical.

At the end, the interviewers encouraged me to explore AI and work on related projects. There was no HR round.

Results were announced the next day and I got selected for intern+full time role.

Tips:

- Be consistent in practicing DSA.
- Have a few solid projects on your resume.
- Brush up on SQL.
